DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 11 is rejected under 35 U.S.C. 102(e) as being anticipated by Dickers et al. (US 6,185,935).

Regarding claim 11, Dickers et al. teaches an array of temperature sensors arranged in an exhaust passage of a gas turbine, each temperature sensor outputs a temperature signal indicative of a temperature of combustion gases proximate the sensor (Fig. 1, Ref. 24); a computer system including a memory storage device, a processor, an output device, and an input device, wherein the processor is operatively coupled to the storage device, output device, and input device (column 4, lines 52-57); the memory storage device including information indicative of temperature signals from the temperature sensors (column 5, lines 28-29), and algorithms for identifying an abnormal combustion gas temperature signal based on the temperature signals (column 5, lines 28-31), and algorithms for correlating a temperature sensor outputting a temperature signal indicative of the abnormal combustion gas temperature to a location in the combustion section which is experiencing an abnormal combustion gas temperature (column 6, lines 24-29); and the output device providing an indication of the location in the combustion section experiencing the abnormal combustion gas temperature (column 6, lines 27-29).

Allowable Subject Matter

Claims 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the indication of the allowability of claim 12 is the inclusion of the limitation that the algorithms include a swirl angle algorithm to estimate the swirl angle experience by combustion gases flowing from the combustion section to the temperature sensors. It is this limitation that is in the claimed combination that has not been found, taught, or suggested in the prior art that makes these claims allowable.

The primary reason for the indication of the allowability of claim 13 is the inclusion of the limitation that the location in the combustion section is a polar graph of the combustion section with an indicator at a position on the graph corresponding to the location in the combustion section experiencing the abnormal combustion gas temperature. It is this limitation that is in the claimed combination that has not been found, taught, or suggested in the prior art that makes these claims allowable.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Meagan S Walling whose telephone number is (703) 308-3084. The examiner can normally be reached on Monday through Friday 8:30 AM to 5 PM.

Application/Control Number: 10/086,378
